January 1st, 1924

Dear Sir:

In presenting this, our fifty-second "annual price list" we wish to call particular attention to our NUT TREES. The demand for nuts of all kinds is constantly increasing. The tonnage of nut meats used in the manufacture of candy is almost beyond belief.

Enormous quantities are imported. These should and can be produced in this country—chiefly on the Pacific Slope— and will be as soon as growers realize their opportunities.

Forward looking ranchers—"red ink" deciduous fruit growers—developers of orchard tracts—growers with grave marketing problems—are now realizing the possibilities in FILBERTS, CHESTNUTS, WALNUTS, PECANS.

Diversification of crops means success. The NUT CROPS are today's "best bet". They offer growing markets, staple prices, non-perishability, low cost of harvest, low cost of maintenance. They are adaptable to rough and steep land and require little water.

We offer you the best varieties, fair prices, thrifty true to name stock, backed by fifty-two years of square dealing.

Besides nut trees our list shows all that is good in FRUIT TREES, BERRY PLANTS, GRAPE VINES, TREE PROTECTORS.

--- We have no agents anywhere ---

Yours for good fruit and nut trees,

FELIX GILLET NURSERY
**FILBERTS**

**Their History and Culture**
- We are publishing a comprehensive
- Variety of trees, grown with the help of experts
- Planted, along with other varieties.
- The type and hardness of the plant

**NUTS**
- The filberts are: crunchy, large, round, 1 inch thick by 0.5 inch thick, Good quality.
- Under the code, exceeding 0.5 inch in thickness, Excellent quality, good bearer. Few trees for a short period.

**TRADE**
- There is a large selection of filberts, including several varieties, for planting and cultivation.
- Every grower of deciduous fruits who has experienced red-leaf tree is aware of the marketing problems that might arise. Filberts can be very profitable, but they require careful planning and management.

**DIFFICULTIES**
- We have found that many filbert growers are faced with problems such as the following:
- Insufficient supply of filberts
- Insufficient demand for filberts
- Insufficient yield of filberts
- Insufficient variety of filberts

**SUGGESTIONS**
- We recommend that growers of deciduous fruits take these problems into account when planning their crops.
- They should consider the following:
- The demand for filberts
- The yield of filberts
- The variety of filberts
- The market conditions for filberts

**RATES**
- We quote prices for filberts and other deciduous fruits, under the following conditions:
- Payment in advance
- Firm orders only
- No cancellations

**REINFORCEMENTS**
- We encourage filbert growers to take advantage of our experience and expertise, and to work closely with us, to ensure the success of their filbert crops.

**Pecans**
- This rich and highly favored nut has long been confined to the Southern states but can now be grown as far north as Canada. Although early maturing varieties are now an established crop in the United States, the industry of the more northern varieties is still in its infancy. These trees are either grafted and pruned or left to grow to maturity. Pecan nuts, grown in the United States, are the most desirable of all pecan varieties.

**Chestnuts**
- Chestnuts are grown on the coast of France and are harvested for the market. There are 360,000 acres of chestnuts on the coast, and 3,500,000 pounds of chestnuts are produced each year. The chestnut industry is an important part of the French economy.

**Walnuts**
- The distribution of the hardy French varieties of walnuts is a matter of great interest to many Californians. Several kinds of walnuts are grown in California, including the Mission and the California black walnut. The Mission walnut is hardy and is grown extensively in California. The California black walnut is also hardy and is grown in smaller quantities in California. These walnuts are used for the production of walnuts, and are also a valuable source of food for hogs and horses.

**Apples**
- We have found that apple crops, grown in the United States, are the most satisfactory of all deciduous fruits. The apple industry is an important part of the United States economy.

**Figs**
- We have found that fig production in the United States is increasing rapidly, and that figs are becoming a valuable source of fruit for the market. The fig industry is an important part of the United States economy.
PEARS

Our trees have vigorous Blight Resisting Japanese Roots. Large growers give us repeat orders year after year, for their trees. Pear on Japanese Pear.

In Order of Ripening:

- Early Rose
- White cling, very early, very hardy, handsome and delicious.
- Alton
- Early white freestone. Queen of all white peaches. Beautiful color, high quality.
- Early Elberta
- Large yellow freestone. Healthy, good bearer, high quality, best for canning.
- Elberta
- A little later than above. The well known good old Elberta.
- Early Crawford
- Large yellow free-stone. Fine quality. Good for table or canning.
- Late Crawford
- Large yellow free-stone. Of highest quality.
- Lovell
- Very large yellow freestone. Excellent for canning.
- Phillips Cling
- Large, round, yellow cling. Preferred for canning.
- Krummel
- Very late yellow free-stone of handsome color and high quality. Ripens in October after all others have gone.

ASPARAGUS

Palmetto. The best tasting kind and fit to eat for more than half its length.

$2.50, 100

RHUBARB

Strawberry... 25c. each; $2.25 doz.

BERRIES

Cory’s Thornless Blackberry

One year transplants

<table>
